

During today's seminar we listened to Kai Armstrong, Shawjohn, and Usha Harali . The name of the seminar is Panel with Visa technologists. Kai Armstrong is a university liaison at Visa. Usha Harali is an engineering manager at Visa. Shawjohn is an software engineer at Visa. He mentioned using angular on one of his projects. At today's event Kai Armstrong mentioned that Visa has over 16 tech organizations. She also talked about the opportunities for new grads. Kai Armstrong mentioned that the immersion program is mainly for interns with little to no internship experience. Visa also has the black scholars and jobs program for people of color. Kai Armstrong also mentioned that Visa holds virtual events and most of their internships are currently remote. Shawjohn mentioned that he is writing code at least 80% of the day. Kai also went into depth about the interview process and the coding assessments visa presents to interviewees. Visa makes money by data processing, service, and international transaction. I really enjoyed learning about what it is like to work at Visa. In the future, I would like to help develop the visa app. A question I had for the speakers is how the internal mobility of the company is.
