

During today's seminar we listened to Tyler Wooten, Danielle Quintanilla, and Hwa Ho . The name of the seminar is J.P. Morgan Chase. Hwa Ho is a scrum master at J.P. Morgan Chase. Tyler Wooten is a software engineer at J.P. Morgan Chase. Danielle Quintanilla is a campus recruiter at J.P.Morgan Chase. Tyler Wooten mentioned that he is writing code at least 80% of the day. His tech stack daily mostly involves python. Hwa Ho mentioned that he actually enjoys the hybrid model of work that has been created in response to COVID. He also mentioned that the coding challenges are more similar to leetcode than code you would see working at the job. Tyler Wooden mentioned that there are openings for interns to work on mobile development for the chase app in Plano, Texas. Danielle Quintanilla mentioned that the immersion program is mainly for interns with little to no internship experience. Hwa Ho mentioned that he sees the following as challenges for the company moving forwards: Innovations in fintech and the regulatory inventories. Tyler Wooten mentioned that he hopes that the company is able to move everything over to the cloud in the most cost and resource efficient manner. A question I had for the speakers is how the internal mobility of the company is.
